## Application Note - EasyPREP Sample Handler AccuNORM validation

## Test Procedure:

The following test is a study of AccuNORM accuracy and consistency. Sample Handler and its AccuNORM option were used to normalize 50ml DigiTUBEs with DI water. 20 DigiTUBEs were tared and manually filled with a random volume of DI water between 10 and 40 ml . The DigiTUBEs were measured for current volume and then filled to 50 ml with DI water using AccuNORM. Then, the tubes were weighed and the total volume of water was calculated.

Results:

- Water density: $0.99715 \mathrm{~g} / \mathrm{ml}$
- Expected volume: 50 ml

## Conclusion:

Standard deviation is 0.12 ml (relative standard deviation of $0.25 \%$ ). This test shows accuracy and consistency of automated normalization done by Sample Handler and AccuNORM.
